C. Agrometeorological Advisories

Crop	Stages	Problems	Agro-meteorological advisories		
	No Rainfall ** The sky will be cloudy. High relative humidity will be experienced. Low night temperature and high day temperature will be experienced. Hence there will be				
General					
conditions					
	distinct difference between day time temperature and night temperature.				
	There is no rainfall from February 04 to 08.				
General Recommendat ions	In plantation crops, water conservation measures should be adopted. Give mulching in the soil with crop residues, green or dried leaves. The trashes used should be free of any pest and diseases. Avoid the trashes of the same species as mulch. This will help to prevent the multiplication of crop specific pest and disease causing organisms. Powdering the top soil using a secondary tillage implement and spreading it uniformly over the field, will help to conserve water for a long period of time in the fields.				
	Restrict the spraying of pesticides/fungicides operations to early morning and evening hours when the air is calm.				
	Irrigate the crop when the water is available in the evening or early morning. Adopt drip irrigation method for maximum water use efficiency				

Paddy	Grain filling stage	Rice bug	Apply Azadiractin 3000ppm stock after diluting in water @ 3ml/L. To have a better control add and stir one to two ml. of Malathion 50EC per litre of the diluted Azadiractin solution before applying. The spraying should be done in the evening, immediately after sunset.
Rice	Flowering stage	Blast disease	Spray Fujione (@ 2ml per litre of water) Spray Fujione or Nativo (@ 2ml/litre of
Coconut	All stages	Stem bleeding	Chisel out the affected parts and apply Bordeaux paste. Drench the palm basin (2m radius) with 40 litres of 1% Bordeaux mixture. After one month, apply 5 kg Trichoderma enriched neem cake and 500g of Ayar® (micro nutrient mixture)
